

WOOD WALL

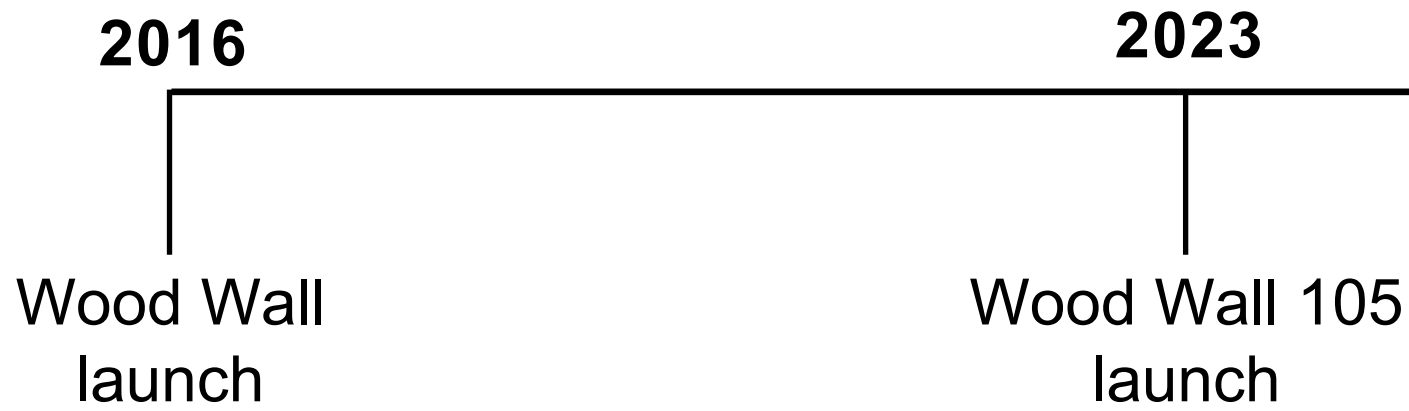

Wood Wall is a wooden wall system that combines modernity with timeless quality. It is not simply a product, but the expression of a new approach through which Citterio embarks on a journey of rediscovering materials and their essence. Crafted using solid wood profiles, the system seamlessly blends traditional craftsmanship with contemporary technologies. This fusion of tradition and innovation gives rise to warm, natural and refined spaces, redefining the boundaries of modern design.

WOOD WALL CONCEPT

HISTORY

Wood Wall is a wooden partition system that marked the beginning of Citterio’s research into natural materials and manufacturing techniques, highlighting the specificity of their characteristics: warmth, colour, scent, craftsmanship potential and functionality. The decision to return to wood finishes does not stem from a nostalgic attachment to traditional craftsmanship; rather, it is driven by principles of modernity and a strong focus on quality.

A VERSATILE SOLUTION

Wood Wall combines precision, elegance and functionality, integrating seamlessly into a wide range of architectural contexts. In office environments, it helps define operational and collaborative spaces while ensuring acoustic comfort and high perceptual quality; in meeting rooms, it enhances the atmosphere with a refined material presence.

Its timeless aesthetic, combined with the system's technical performance, makes it an ideal solution for configurations that require versatility, material quality and design coherence.

WOOD AS A UNIFYING THREAD

Wood becomes the unifying thread of a warm, tactile and welcoming workplace environment. Citterio adopts a distinctive design language that connects the architecture of Wood Wall with other company collections, such as the Borealis seating system with its oak frame, and the comfort of the W-SS acoustic booths. Three systems, one shared language: an aesthetic, tactile, chromatic and proportional coherence that shapes a harmonious space to be experienced with continuity.

TECH BY NATURE

Citterio's vision is expressed through the Tech by Nature philosophy: timeless design, natural materials and advanced technological solutions that engage in dialogue with the project and enhance the value of the space.

The company works alongside architects, designers and clients in the creation of integrated environments, where products are shaped around functional and acoustic requirements, improving people's experience and wellbeing, with careful attention also paid to the environment.

AUTHENTIC MATERIALITY

Wood Wall enhances the natural elegance and solidity of the material. The profiles are made from finger-jointed solid wood, veneered in oak or walnut and finished with an open-pore lacquer.

WOOD WALL FEATURES

WOOD WALL FEATURES

- **Veneered solid wood profiles**
- **Profile dimensions: 88 × 50 mm ($3 \frac{7}{16}$ " × $1 \frac{15}{16}$ ")**
- **Three types of glass partitions**
- **Solid (opaque) partitions available**
- **Snap-in glass retaining system**
- **Glass thickness: 10 or 12 mm ($\frac{3}{8}$ " or $\frac{1}{2}$ ") , with or without acoustic films**
- **Transparent polycarbonate joints**
- **Single-leaf hinged doors in single-glazed, double-glazed and solid versions**
- **Sliding doors in single-glazed, double-glazed and solid versions**
- **Double-leaf door option available**
- **Available accessories: integrated storage unit, technical module**
- **Three wood finishes available**
- **Acoustic performance: up to 35 dB for doors, up to 40 dB for glass partitions**
- **Installation tolerance: ± 8 mm ($\pm \frac{5}{16}$ ")**

Details of the different Wood Wall partition solutions

SINGLE-GLAZED

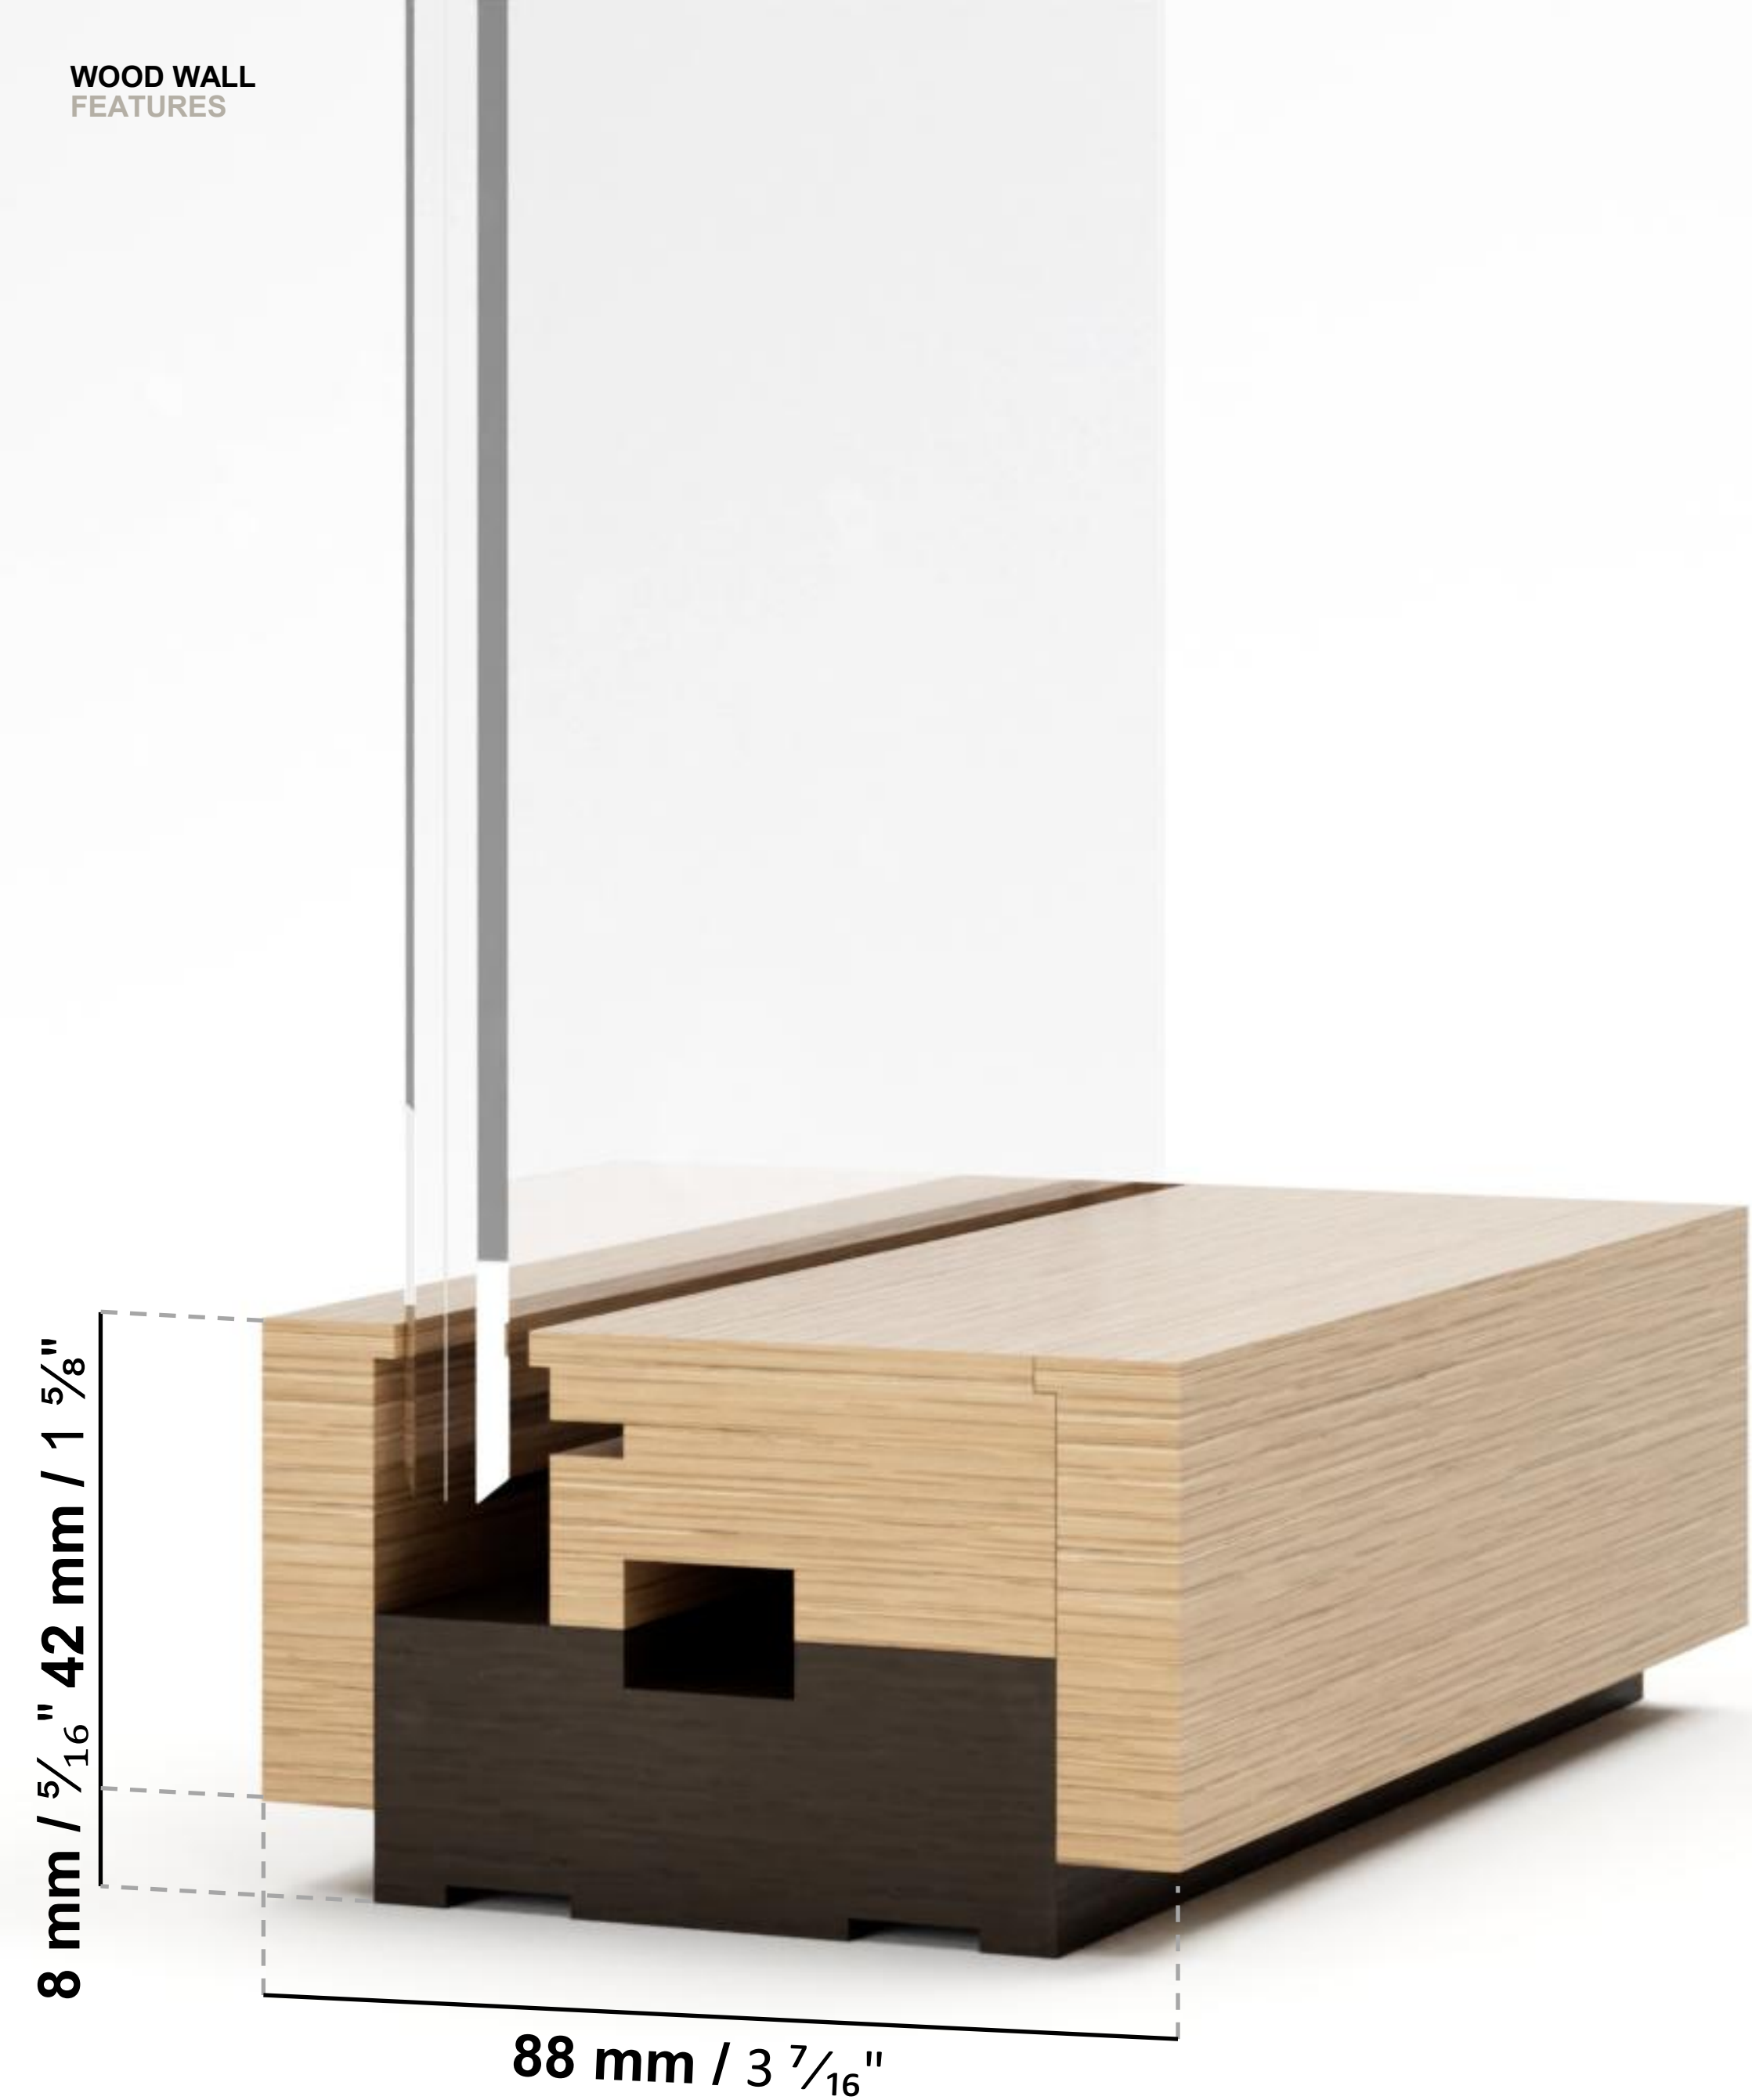

D88 x H50 mm (3 ⁷/₁₆" x 1 ⁵/₈")

The classic central glass partition is a symmetrical and understated solution, in which the wooden profiles are expressed in their full expressive strength.

- 5+5.1
- 5+5.2A
- 6+6.1
- 6+6.2A

Section detail of the single-glazed version

OFFSET SINGLE-GLAZED

D88 x H50 mm ($3\frac{7}{16}"$ x $1\frac{5}{8}"$)

A variation on the theme. The asymmetrical partition creates differentiated depth effects in the profiles, depending on the viewing side.

- 5+5.1
- 5+5.2A
- 6+6.1
- 6+6.2A

Section detail of the offset single-glazed version

DOUBLE-GLAZED D88 x H50 mm (3 ⁷/₁₆" x 1 ⁵/₈")

The double-glazed partition forms a transparent barrier that allows the subdivision of more private spaces.

- 5+5.1
- 5+5.2A
- 6+6.1
- 6+6.2A

SOLID PANEL

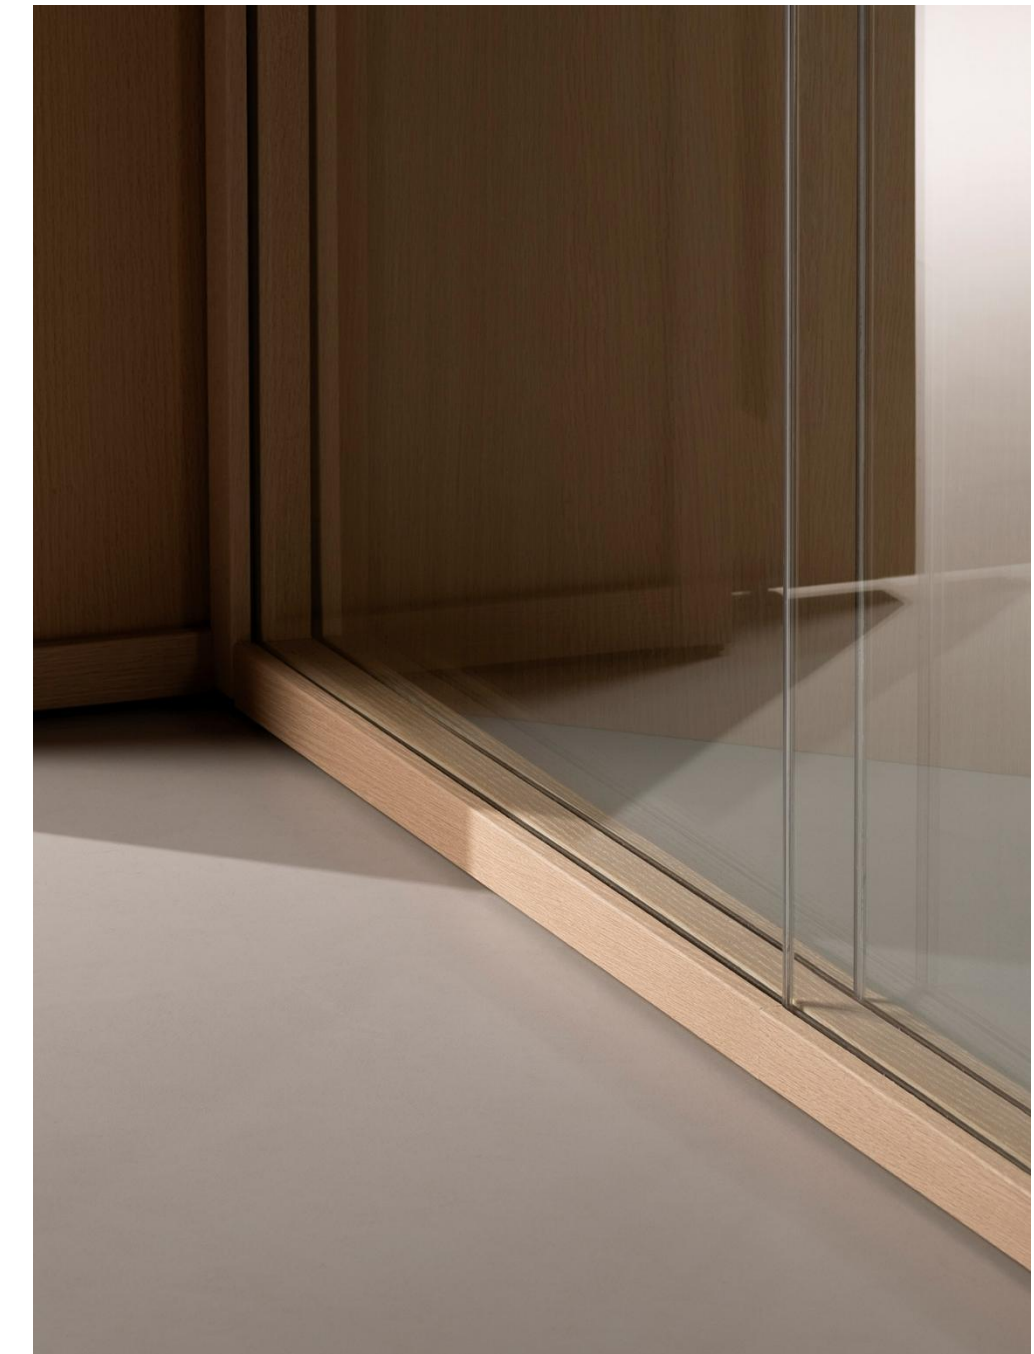

D88 x H50 mm mm (3 ⁷/₁₆" x 1 ⁵/₈")

The partition made of composite-structure wood panels ensures perfect continuity with the glazed modules through a recessed joint.

Section details – solid partition

CONNECTIONS

The different partition versions (central single-glazed, offset single-glazed, double-glazed and solid) can be connected to one another using a series of specially designed wooden connecting posts. Linear connections as well as two-way and three-way junctions are possible.

JUNCTIONS

The joints between the glass panels are made using transparent polycarbonate profiles and are sealed to ensure acoustic insulation, the mechanical stability of the partition and the planarity of the glass panes. The system allows for linear joints as well as two-way and three-way junctions.

A COMPLETE RANGE OF DOORS

The Wood Wall system is complemented by a wide range of door solutions, designed to integrate seamlessly into any environment. Framed glazed hinged doors enhance brightness and transparency, while solid hinged doors offer privacy and refinement. Glazed sliding doors provide a modern, minimalist aesthetic, while solid sliding doors ensure greater discretion without compromising on design value. One of the system's distinctive features is the vertical pull handle, designed in continuity with the profile geometry to ensure formal coherence and strong product recognisability.

ACCESSORIES

The storage systems, designed with extreme precision to integrate perfectly with Wood Wall, become an essential part of the overall project. More than simple storage solutions, they harmonise with the partition, enhancing the aesthetic quality of the space. Their discreet integration ensures functionality while delivering a visually uniform and orderly result.

Wood Wall also offers the possibility of designing and incorporating a solid technical module between the partitions, intended to house and conceal cables and building services.

CITTERIO

PRIVACY SOLUTIONS

When higher levels of privacy are required, the Wood Wall system offers a wide range of solutions to ensure the appropriate degree of visual screening.

From reeded, acid-etched or gradient glass panels, to switchable LCD glass, coloured or back-painted glass, and the integration of curtains, each option is designed to combine aesthetics, comfort and full control over privacy.

ACOUSTIC PERFORMANCE

Wood Wall is a partition system designed to ensure a high level of acoustic comfort within interior environments.

Performance varies depending on the configuration, reaching up to 40 dB (laboratory-tested) for the double-glazed partition, offering a range of sound insulation levels suitable for different design requirements.

SUSTAINABILITY AND CERTIFICATIONS

CERTIFICATIONS

Wood Wall has obtained the EPD (Environmental Product Declaration) product certification, confirming Citterio's commitment to information transparency. The certification is valid for all partition variants: central single glazing, double glazing, offset single glazing and solid partition.
